

Initial filling of the oxygen sensor

The sensor is delivered unfilled and needs to be filled before first use:

Be particularly careful when working with the electrolyte:
The electrolyte is caustic. (strong alkali, KOH)
Avoid skin contact and protect your eyes!

Unscrew the lock plug from the refill opening

Screw off the membrane cap

Fill the pipette with KOH

Fill 3/4 of the membrane cap with KOH

Lock the membrane cap

Fill the sensor shaft completely with KOH,

Shake smoothly to remove air bubbles

Screw the refill opening tight with the lock plug

Before first use: store the sensor in the storage flask (filled with deionised water) for 2 hours

Erstbefüllung des Sauerstoffsensors

Der Sensor wird trocken angeliefert und muss vor der ersten Verwendung befüllt werden:

Vorsicht bei allen Arbeiten mit dem Elektrolyt:
Der Elektrolyt ist ätzend. (starke Lauge, KOH)
Kontakt mit der Haut vermeiden, Augen schützen!

Verschlusschraube aus der Nachfüllöffnung schrauben

Membrankopf durch drehen entfernen

Befüllpipette mit KOH aufziehen

Membrankopf zu 3/4 mit KOH befüllen

Membrankopf fest verschrauben

Sensor über die Nachfüllöffnung komplett mit KOH befüllen

Durch leichtes Schwenken Luftblasen entfernen

Nachfüllöffnung mit Verschlusschraube verschließen

Vor der ersten Nutzung: den Sensor 2 Std. in der Aufbewahrungsflasche lagern (gefüllt mit destilliertem Wasser)
